

1. The first step in the process is to identify the problem. This involves gathering information about the situation and the people involved.

2. The second step is to analyze the problem. This involves breaking the problem down into smaller parts and understanding the causes and effects.

3. The third step is to develop a plan. This involves deciding on the best way to solve the problem and setting goals and objectives.

4. The fourth step is to implement the plan. This involves putting the plan into action and making sure everyone is following it.

5. The fifth step is to evaluate the results. This involves checking to see if the problem has been solved and if the plan was effective.

6. The sixth step is to make adjustments. This involves making changes to the plan if it is not working and ensuring that the problem is fully resolved.
